Figure 1 consists of four subplots arranged in a 2x2 grid. Each subplot shows the probability of a correct response (P_c) on the y-axis (ranging from 0.000 to 1.000) against the number of subjects on the x-axis (1, 5, 10). The subplots are labeled by the number of trials: 100 (top-left), 500 (top-right), and 1000 (bottom-left and bottom-right). In all cases, P_c increases as the number of trials increases and decreases as the number of subjects increases. The 1000 trials plot shows the highest P_c values, while the 100 trials plot shows the lowest.
