11. 2. 2. *Effect of the type of the substrate on the rate of the reaction.* The rate of the reaction was measured at 25°C in the presence of 0.01 M of the catalyst in the reaction mixture. The results are shown in Table 1. It can be seen from the table that the rate of the reaction is higher in the presence of the catalyst in the reaction mixture than in the absence of the catalyst. The rate of the reaction is also higher in the presence of the catalyst in the reaction mixture than in the absence of the catalyst.
