Student's Explanations		Score
1. The first step is to identify the variables in the problem. In this case, the variables are the number of hours worked (x) and the total amount earned (y).		1/2pt
2. The second step is to write the equation for the first job. Since the person earned \$100 for 10 hours, the equation is $y = 10x$.		1/2pt
3. The third step is to write the equation for the second job. Since the person earned \$150 for 15 hours, the equation is $y = 10x + 150$.		1/2pt
4. The fourth step is to solve the system of equations. We can do this by substitution. We can substitute $y = 10x$ into the second equation, giving us $10x = 10x + 150$.		1/2pt
5. The fifth step is to simplify the equation. This gives us $0 = 150$, which is not possible. This means that there is no solution to the system of equations.		1/2pt
6. The sixth step is to conclude that the person did not work for the second job.		1/2pt
7. The seventh step is to check the solution. We can check by plugging the values back into the original equations. For the first job, $y = 10(10) = 100$, which matches the given information. For the second job, $y = 10(15) + 150 = 300$, which does not match the given information.		1/2pt
8. The eighth step is to write the final answer. The person did not work for the second job.		1/2pt
9. The ninth step is to write the final answer in a complete sentence. The person did not work for the second job.		1/2pt
10. The tenth step is to write the final answer in a complete sentence. The person did not work for the second job.		1/2pt
